Invitation

Triage is applied in all Emergency departments in Europe and aimed to safely guide the patient flow on a busy emergency department, and effectuate that ill patients are seen in time. The Manchester Triage system (MTS) is the most commonly used triage system in the Netherlands.

For this symposium we have invited international experts who developed and modified MTS for Europe. Recent research on the validity of the MTS and their performance in different patient groups will be presented.

The pitfalls in the practical application, the way in which the system can be evaluated and how it can be used for telephonic triage or streaming at the emergency department will be discussed.

We are happy to invite you for this symposium.
